RED-STAR WASHING MACHINE

The latest in washing machines.

100 years ago this Red Star Manual Agitator was the bee' knees.

During operation the lever was pushed forwards and backwards, which via gearing rotated dollies to spin the washing in the wooden barrel.

These machines were made by Beatty Bros in Canada, and this one is fitted with a wringer made by A. W. Co. USA.

There are lots of other old washing machines in the cottage laundry at the museum.
